

InfoTrace™ MII

A Complete Endpoint Security & Policy Management

- InfoTrace Integrates Multiple endpoint Cybersecurity requirements into ONE platform

Protects Against External Attacks

- Blocking and remediation of zero-day malware (including ransomware)
- Application whitelisting and blacklisting
- Browser vulnerability protection

Maintains Compliance

- Pre-configured policy templates
- Real-time reporting and remediation on policy violations
- Blocks unsanctioned endpoints

Prevents Data Theft

- Controls access to applications, files, folders, drives and external storage
- File print and copy restriction
- Enforces two-factor authentication

Accelerates Incident Response & Discovery

- Provides timeline for behavior of suspicious files
- Collects detailed syslog data
- Review alerts in the console or export to a SIEM

Increases Efficiency

- Monitoring, enforcement and remediation from a single agent
- Management from a single-pane-of-glass console reduces time and cost of compliance

How It Works: Enable new endpoint security & compliance capabilities by introducing one single agent to integrate into traditional Perimeter Security Focused devices

1) Easy Implementation:

Integrate multiple endpoint agents & software into one single endpoint agent

2) Simple Action:

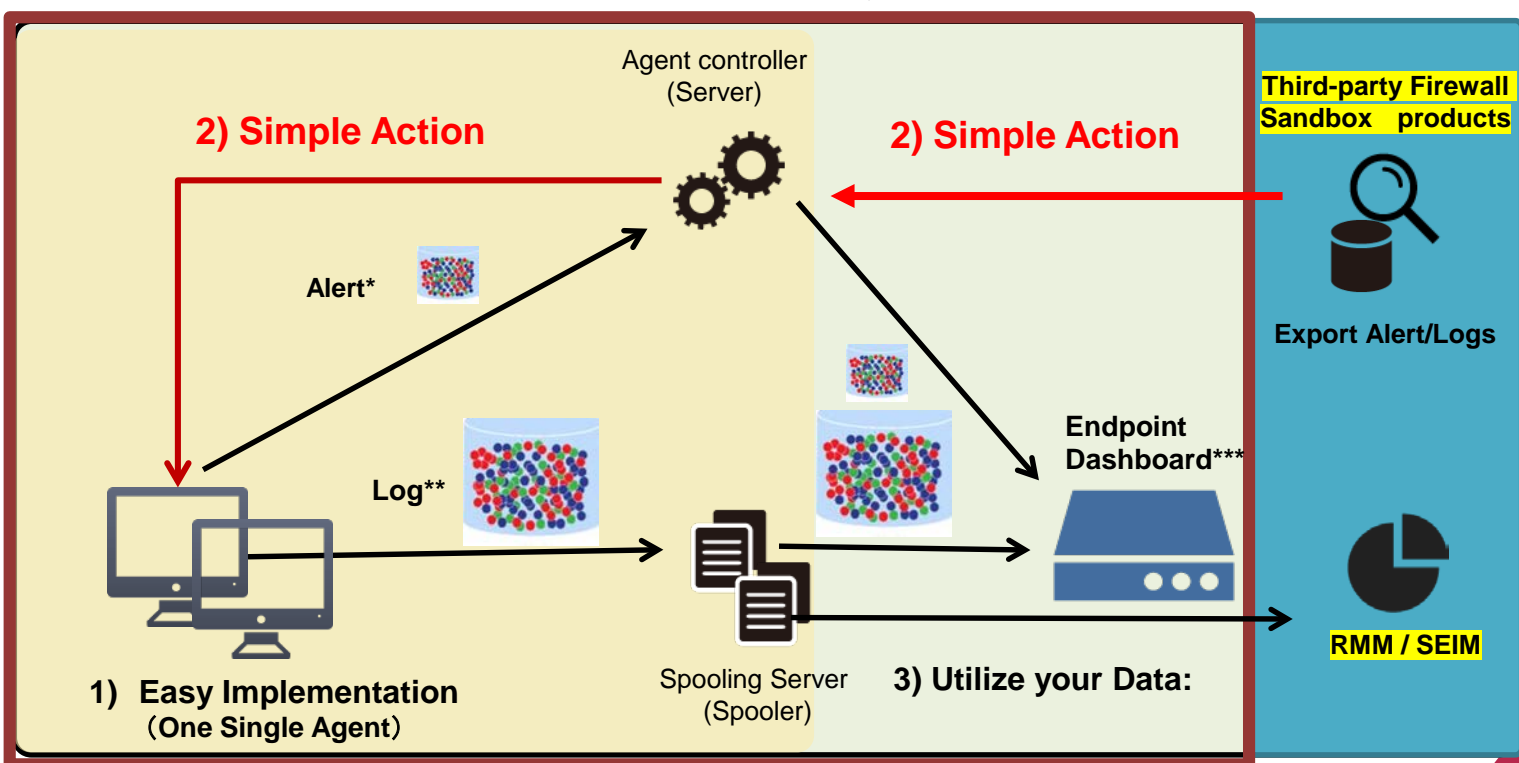

Take action/remediation toward malware, data leak and security policy violation alerts using one control file

3) Effective Verification:

Monitor the compliance and enforcement violation. We provide "digital policy file" for compliance including SEC, FTC, NIST, GLBH, HIPAA, PCI-DSS, ISO, ISMS and NY DFS

InfoTrace: Endpoint Security Focus

Traditional Perimeter
